

READ BEFORE GROWING IN PittMoss!! (At the very least, read what is in **RED)**

PittMoss is unlike any other soil you have used before. Our products have a high aeration and water retention capacity. As a result, many of the popular brands of fertilizers found at your local hydroponic stores have feed schedules that are more aggressive than necessary when using PittMoss products.

IMPORTANT TIPS TO FOLLOW:

- **A slight reduction in watering and fertilizers often results in a more vigorous and healthy plant.** Don't be afraid to stick your finger deep into the soil, penetrating the upper crust to discover how much water is in the soil.
- **Organic fertilizers are an excellent and recommended choice** when using PittMoss. The soil is teeming with micro biology and can make quick use of organic inputs.
- **If you choose to use a mineral salt based product, it's recommended to scale back on the application rate, typically by a third to one half. After a high usage of concentrated fertilizers, salts can build up in the soil and create an adverse environment for your plants' rhizosphere.**
- **If proper care is used, a flush will only be necessary near the last week of harvest.**
- **Avoid fertilizers containing ammonium.**
- **Our coco coir product, Coco Complete, is pre-treated with additional calcium and magnesium. This eliminates the need for additional CalMag products with Coco Complete.**

SO, HOW DO I KNOW IF MY FERTILIZER IS ORGANIC OR MINERAL BASED?

Most organic fertilizers will say organic on the label. OMRI listed products are certified organic. Or, give it a sniff. If it stinks or smells earthy it's probably organic. If your product is a consistent powder or a uniform colored liquid, chances are it's mineral based. Either way, use less. **Again, extra caution should be given to mineral based products. Typically, fertilization rates should be reduced from the manufacturer's recommendation by one third and up one half.** With a little less water and a little less fertilizer your plant will grow a whole lot better in PittMoss.
